SUBJECT: Seal Retainers - 15PFR Plunger Pumps

Retaining Ring/Seal Cases - Models: 650, 651, 660, 661, 1050, 1051, 1051C, 1057

To assure proper seating of the Lo-Pressure seal and to simplify servicing of the 15PFR plunger pumps, the retaining ring has been eliminated. Because the retaining ring has been eliminated, the above listed seal cases have been modified to eliminate the retaining ring groove and a new 2-piece seal retainer has been introduced. This new 2-piece seal retainer holds the Lo-Pressure seals in place, as well as the wicks.

Even though the 1530 and 1531 models did not use retaining rings or seal cases, a new 2-piece seal retainer has been introduced for these models as well.

When servicing pumps with the old retaining ring, remove existing seal retainers with wicks and retaining rings and **DISCARD ALL THREE ITEMS**. If the old style seal case is in good condition, it can still be used with the new seal retainer and wick, **HOWEVER, DO NOT INSTALL THE OLD RETAINING RING**. If the old style seal case is in poor condition, then follow chart below for a new seal case and seal retainer for your pump model.

To assure proper servicing, the new 2-piece seal retainer is included in the seal kit for all 15PFR plunger pumps. NOTE: Wicks are not included in seal kits. These modifications start with the manufacturing date of 7/05.
