SUBJECT: Machined Valves-15PFR and 18PFR

The popularity of 3000 PSI performance of the 15 and 18 Frame stainless steel pumps has escalated. We have tested a new machined valve design that offers longer life and considerably greater strength. Since the valve kits are commonly used for all 15 and 18 Frame stainless steel models, this new valve is being included in all versions of the valve kits. The Kit part numbers will remain the same, however, the individual Valve part number is changing. Production pump models 651, 661, 1851, 1861 include this new valve effective with February 2001 production.

Old Part Number
(Stamped)

44038 Valve

New Part Number
(Machined)

48793 Valve

Kits being affected with this change include:

34387 Valve Kit - NBR	651, 661, 1051, 1057
30987 Valve Kit - FPM	651, 661, 1051, 1057
31258 Valve Kit - EPDM	651, 661, 1051, 1057
701434 Valve Kit - FPM	1851, 1861
701695 Valve Kit - NBR	1851, 1861
701804 Valve Kit - EPDM	1851, 1861
